Please change the text on this screen:

Encounters

Greetings. The purpose of this program is to allow you to enter data about your health so that we may calculate risk values and help your provider predict problems BEFORE they occur. It is very important that you fill in ALL of the data and of course, fill it in accurately and honestly. This program is for YOUR benefit so your provider can take the best care of you.

As you fill in the data, each field is automatically saved, so you can leave at any time and re-start where you left off. After you have entered all your data and have clicked the "SAVE" button at the bottom, you will see a list of "Clinical Triggers" that are specific recommendations for you based upon answers you gave about your health. You may also see the "Clinical Triggers" at any time after you have have completed your data entry by clicking on the "Clinical Triggers" button below.

After you have SAVED your data, click "Generate Report". Once you generate your report, you may VIEW it, SAVE it and PRINT it. You may also switch to another language by changing the language selection in your Patient Demographic area.

When you are ready to begin, click the START button below

`Start` `Clinical Triggers` `Generate Report` `View Report ▾` `Print Patient Report`

To this text (and make the text font **darker** please so it's more readable):

Greetings! Thank you for completing your Annual Wellness Visit and/or Health Risk Assessment. Next, we will ask our Medical Director to schedule a brief call with you to review this information and help you with any medical questions you may have.

If you did not fully complete the assessment, you may click the "Start" button and continue filling in your answers.

If you DID fully complete the assessment, a member of our Clinical Team will help get your appointment with our Medical Director set up and there is no further action needed on your part (you may close your browser in this case).

If you have anything you want to discuss with our Medical Director, please feel free to mention those items to him or her when you have your appointment.

Thank you and we wish you the best of health!

Bug – Missing field

The "Status" field is not being populated and it is a **required field**. Your changes to the program may be skipping over this question, but it's critical that a value be selected from the options available for that ORG (Practice) and saved back to the database.

It is possible that the original code never populated this field. But please research your /tablet code to try to figure out what that Status field is and where the list comes from and where the Status is stored.

You should do a SELECT query on that Org's Status list to get the short list of Status codes and then choose the first Status of the list to store in the database.

Bug – Missing fields

When I ran this query:

```
USE Wellness_eCastEMR_Data

SELECT TOP(10) * FROM Appointments ORDER BY Appointments_ID DESC
```

I saw the results of the data being stored to Appointments for Appointments_ID = 508602 which was my test patient for your code.

I see the following data elements missing:

- ➢ **Patient_FName**
- ➢ **Patient_LName**
- ➢ **Patient_DOB**
- ➢ **Patient_SSN**
- ➢ **Patient_MRN**
- ➢ **Provider_FName**
- ➢ **Provider_LName**
- ➢ **Provider_UPIN**
- ➢ **Provider_Number**
- ➢ **Dept_ID**
- ➢ **ApptStart_UTC**
- ➢ **ApptStop_UTC**

Please reference your /tablet code to see if you can identify where those data are coming from. The data is written to Appointments when the Appointment record is first written, but these fields are not being populated.
